

Next-Generation MEO (Map Engine Optimization)

AISEEN

Simple setup. Get "seen" by AI today.

The Latest AIO System

Built for AI search on ChatGPT, Gemini and Google AI as well as Google,
so your business gets chosen by both.

AISEEN

Company Name	AIBOT Inc.
Established	July 2020
Location	HQ: 9F Shinagawa East One Tower, 2-16-1 Konan, Minato-ku, Tokyo Sendai: 3F Solala Plaza, 1-2-15 Kakyoin, Aoba-ku, Sendai, Miyagi
Capital	10,000,000 JPY
Employees	20
Business Activities	Development and promotion of LINE Official Account extension system "LIBOT" Software development, IT consulting, Website creation and operation

AIBOT has been featured and interviewed across more than 70 media publications.

*As of January 2026

People now ask AI for nearby spots

In the past, people searched for businesses by typing '[Location] [Category]' into a search box. Today, however, directly asking AI natural questions like 'Where is a well-reviewed clinic near here?' is rapidly spreading, especially among younger generations.

ChatGPT に質問

Good lunch spots in Shinagawa?

✦ おすすめはこちらです：

• Italian Restaurant A

• French Restaurant B

• Yakiniku Restaurant C

Is your business included there?

AI suggests 'recommended stores' naturally within the flow of conversation, and users accept these suggestions almost as-is.

In other words, which stores AI chooses to feature is becoming the new gateway that directly drives customer visits.

If your competitors appear here but your own business does not, you are excluded from customers' options from the very start.

Moving from the Era of "Googling" to "Asking AI"

Consumers' search behavior is already undergoing a major shift. According to a survey by CyberAgent, the percentage of users employing generative AI for daily searches has reached 37.0%, an increase of 15.7 percentage points in just the past 9 months. This change is not limited to a few tech-savvy early adopters.

37.0%

Expanding Rapidly

66.9%

AI Search Usage Among Teens
Standard for the Younger Generation

Key Point: Notably, **66.9%** of teenagers are already using generative AI for search. In a few years, this generation will become the primary consumer demographic. The perception that it is "only for a select few" is already a thing of the past.

Source: CyberAgent Survey (Published in Web Tan Forum, March 2026) • Percentage of respondents who answered "Use generative AI for daily search."

Generative AI usage surged by ~11x in just 2.5 years

The percentage of people who have used generative AI has expanded approximately 11-fold in just 2.5 years, rising from 3.4% in March 2023 to 38.9% in September 2025.

Similar to the adoption of smartphones and social media, we are witnessing an irreversible shift in user behavior.

Percentage of people who have used Generative AI (%)

3.4% → 38.9%

Percentage of people who have used generative AI (Japan, ages 20–69).

Growth has accelerated since the end of 2024, and we have entered a phase where delay in adoption directly leads to lost opportunities.

Businesses that move quickly will secure a critical first-mover advantage.

AI Recommendations Actively Drive In-Store Visits

The influence of AI goes beyond just 'searching'—it actively drives actual store selection and physical visits. A COLLINS survey shows that nearly 60% of people who discovered a store via AI recommendations visit it 'at least once every two times'.

1. Search Inquiry

2. AI Recommendation

3. Store Visit Action

Nearly 60%

Visit the store "1 out of every 2 times"

Nearly 60% of respondents answered that they visit stores they discovered through AI recommendations. This surpasses both SNS and influencers (both under 50%), representing the highest "decisive power" from initial awareness to actual store visits.

Approx. 15%

Daily & Special Dining Searches

Use "AI Search" to find restaurants for both everyday dining out and special occasions.

Approx. 10%

Active Research Phase

Actively use AI tools during the "detailed research" stage for restaurants they are interested in.

Source: COLLINS Inc. "Survey on Restaurant Selection 2026" (Published Feb 2026 / Surveyed Jan 2026 / 1,049 respondents nationwide who dine out at least once every 3 months with a budget of 3,000+ JPY)

When asking AI for "nearby stores" becomes the norm, businesses not recognized by AI **won't even make the shortlist.**

This is not merely sinking to page 2 of search results — it means ceasing to exist as an option.
"Silently losing customer acquisition opportunities without realizing it" is the most dangerous scenario.

No matter how much you spend on ads or coupons, if omitted from AI recommendations,
you cannot recover those lost customers.

This is a continuous, compounding "Invisible Opportunity Loss".

Merely doing MEO is no longer enough

Q. We are already doing MEO (Google Maps optimization), so isn't that enough?

MEO mainly targets the world of Google Maps.

While effective for users searching maps, customer entry points are rapidly expanding to multiple AI engines like **ChatGPT, Gemini, and Perplexity**.

Traditional MEO is insufficient for multi-engine AI search!

These AI engines cross-reference and answer based on information written across various online media, not just Google Maps.

Therefore, optimizing Google Maps alone **does not guarantee** being selected as an AI response.

In other words, while keeping **MEO as a foundation**, a new approach is required: spreading accurate information across multiple media referenced by AI (**AIO = AI Optimization**).

AISEEN covers both MEO and AIO at the same time to ensure complete coverage.

Simultaneous Optimization for Both Traditional MEO and AI Search (AIO)

AISEEN covers everything from **traditional MEO** to **AI search engine optimization (AIO)** in a single platform.

Not a mere replacement for standard MEO providers.

AISEEN is the **"Next-Generation MEO"** that builds upon standard MEO to deliver complete, all-in-one optimization tailored for the AI search era.

NAP Consistency is the Foundation for AI to Deem a Store Trustworthy

To be recognized as a **"trustworthy store"** by AI, the most fundamental and crucial factor is **NAP consistency**.

Name

(Store Name)

Address

(Address)

Phone

(Phone Number)

Data Consistency

The Core of AI Selection: Identical Business Data Across Platforms

NAP stands for the three most fundamental elements of store information: **Name**, **Address**, and **Phone**. AI engines and search systems heavily rely on whether these three elements are **perfectly identical across all online media** as a critical metric for business legitimacy and trust.

When information is fully aligned, AI rates the store as a **"trustworthy, active business"** and proactively recommends it. If the data is fragmented or mismatched, the AI suspends its judgment to avoid providing inaccurate info, and ultimately **withholds the recommendation**.

Please refer to the following page for concrete examples of data consistency.

AI Only Recommends Businesses It **Accurately and Unambiguously Understands**

Why is being “**recognized**” by AI so crucial? This is because AI only presents businesses it deems trustworthy as recommendations. The three key criteria for this judgment are:

01

Structured & Complete Info

If information supplied to AI is inconsistent or outdated (e.g. mismatched addresses, hours, or menus), the AI cannot recognize your business, leading to exclusion from recommendations.

02

Presence in Trusted Sources

AI cross-references multiple trusted directories and platforms. If your store is not listed there, it won't even be referenced, meaning you will completely miss out on AI-generated answers.

03

Practically Non-Existent

No matter how great your store is, if it is unrecognized by AI, it will never be recommended. You lose the opportunity to even be considered by customers during their search.

Not Recognized = Not Displayed.

To be chosen by AI, it is absolutely essential to first be recognized as “accurate and trusted information.”

When business data is inconsistent, AI passes over recommendations.

If NAP information is inconsistent across directories, AI cannot determine if it is the "same store" and hesitates to recommend it.

Discrepant Data → Skipped by AI

Inconsistent (Common Issue)

- Google Maps: **03-1234-5678**
- Tabelog: **0312345678**
- Official Site: **AIBOT Cafe, Co., Ltd.** / XX Bldg 3F
- SNS: **AIBOT cafe** (No bldg name)

→ AI wonders "Different store?" and skips recommendation

Consistent Data → Recommended

Consistent (Auto-aligned by AISEEN)

Unified format across all directories:

- **AIBOT Cafe Co., Ltd.**
- 1-2-3 XX, XX City, XX Prefecture, XX Bldg 3F
- **03-1234-5678**

→ AI recognizes as a "trustworthy, real store" and recommends

It is practically impossible to keep aligning 100+ directories manually.

AISEEN uses **GBP (Google Business Profile)** as the "**source of truth**" and **continuously auto-aligns** information across all directories.

AISEEN Solves All of These Challenges

AISEEN is a comprehensive service that resolves all your location data challenges. By using your Google Business Profile (GBP) as the single source of truth, it automatically distributes and unifies your store information across 100+ platforms and major AI search engines. With AIBOT handling all complex setups and updates, you can save valuable time and effort.

STEP 1

GBP Management

Optimize Your Profile

Accurately organize and optimize your Google Business Profile information. All setup and configuration is handled by AIBOT.

STEP 2

Automated NAP Sync

Keep Info Consistent

AISEEN automatically synchronizes your verified business data, keeping your name, address, and phone number unified across all directories.

STEP 3

Multi-Directory Syndication

AI Citation Structuring

Instantly publish to 100+ global platforms. AI Citation Structuring ensures your business is recognized and recommended by major AI search engines.

AIBOT manages all complex configurations and updates. There is virtually nothing for you to do.

A Single Configuration Syncs Your Data to Over 100 Global Platforms

AISEEN distributes and updates your accurate business information across more than 100 platforms and services, including search engines, map directories, AI search assistants, social media, and voice search systems.

Google	Apple Maps	ChatGPT	Gemini
Perplexity	Bing	Yahoo!	Navigation Services
Map Applications	Social Media	Review Directories	Voice Assistants

Green cards indicate AI-powered platforms.

Manually registering and maintaining up-to-date business listings across all of these directories is practically impossible. This is precisely why automation delivers immense value.

Core MEO Feature Suite Delivered by AISEEN

01

Store Info
Management

Bulk Location Updates

Manage and update all store location details simultaneously from a single central dashboard.

Competitor Analytics

Track and compare local search visibility, rankings, and review volume against key competitors.

02

Social Media
Integration

Photo & Post Scheduling

Schedule, publish, and cross-post updates and visual content across all major social networks simultaneously.

Unified Inbox

Monitor and respond to customer messages from multiple social media channels in one unified inbox.

03

Review
Management

AI Review Assistant

Draft personalized, professional review responses automatically with AI.

Review Generation

Streamline feedback using dedicated landing pages, SMS, and custom QR codes.

Review Monitoring

Aggregate and monitor customer ratings and reviews across platforms in real-time.

* Review-related features operate in strict compliance with each platform's guidelines.

Content AIO Optimization Option

Bring "AI-Citable" Information Sources to Your Store.

AI search engines generate answers by referencing store profiles, website articles, FAQs, and third-party mentions.

While basic setup provides the "foundation," Content AIO is the strategy to build "AI-cited content."

1

AI Search Needs Survey

Investigate questions users ask AI and design targeted themes.

2

AI-Optimized Article Creation

Article creation based on primary source information.

3

Content Optimization

Rewriting, clarifying conclusions, updating freshness, specifying sources, and QA content conversion.

4

Media Authority Syndication

Implementing structured data and clear E-E-A-T indicators.

5

Reporting & Analytics

Regularly monitor and report citation and mention status.

Monthly: **100,000 JPY~** (excl. tax) Individual quotes provided based on article quantities.

*Citations or appearances in AI responses are not guaranteed.

Frequently Asked Questions to Consider

Q1. How does AISEEN differ from standard MEO/AIO services & pricing?

Standard MEO services typically range from ¥30,000 to ¥50,000/mo, while conventional AIO consulting costs around ¥100,000 to ¥300,000. AISEEN unifies both traditional MEO and AI search optimization in a single solution.

Q2. Why is system automation necessary instead of manual updates?

Continuously updating 100+ platforms manually is virtually impossible. Furthermore, as AI recognition rules evolve constantly, having a dedicated automated infrastructure is essential.

Q3. How soon can we expect to see measurable results?

While 100% guarantees cannot be made, many clients experience tangible results as early as 2 weeks, with highly competitive districts typically seeing measurable impact within 6 months.

Q4. How much operational workload is required from our team?

AIBOT provides full hands-on support for all integration and setup tasks. Your operational workload is virtually zero, though regular GBP updates can help accelerate results.

The Window of Opportunity: Acting "Right Now" When Few Have Adapted

Almost no local businesses have adopted AI Optimization (AIO) yet.

This means that by acting now, you can **completely dominate your local market**.

If You Act Now

While competitors have not yet taken action, you can secure your position as an "AI-preferred business" ahead of everyone else.

If Action is Delayed

In six months, AI search will be the standard. By then, early-adapting competitors will have established an insurmountable lead.

It's not a question of "whether to do it," but "when." This is a first-mover advantage landscape.

The Decisive Choice

For **40,000 JPY / month**, will you become **"A Store Discovered by AI"**,
or do nothing and remain **"A Store That Doesn't Exist to AI"**?

Invest in AI Visibility

A Store Discovered by AI

Ensure search engines index your store accurately, placing you at the forefront of AI recommendations.

Remain Invisible to AI

A Store That Doesn't Exist to AI

Do nothing and miss out on the shifting paradigm, leaving your store completely hidden from modern search queries.

Strategic Outlook:

The migration of search leadership to AI is an unstoppable trend. That is why taking action now, before competitors take notice, provides the most effective and efficient advantage.

Implementation & Onboarding Roadmap

All complex configurations and directory submissions are fully handled by AIBOT. All that is required from you is a simple final verification.

***Platform Indexing Note:** Following Step 4 distribution, propagation across third-party directories may take several weeks to a few months.

Seamlessly Unifying Customer Acquisition and Retention

After AISEEN helps customers find your business and drives store visits, LIBOT converts these visitors into LINE friends to drive repeat visits and referrals. Only when both the entry point (AISEEN) and the retention platform (LIBOT) work together is customer acquisition truly complete.

LIBOT Case Study: Beauty Clinic LINE friends grew from 200 to 4,100+, generating over ¥16M in revenue.

By integrating AISEEN and LIBOT, you can build a seamless, unified system that automates the entire funnel—from initial customer acquisition to long-term repeat retention.
